Events

Step 1 — 2 — 3 — 4 — 5

## Get Started!

This example Stepper will teach you how to use this component. Tap next to proceed to the next step.

← Back

Next →

Create a set of Steps within the Stepper, then use the `on:complete` event to detect when all steps are complete. Since horizontal space may be limited on small screens, we recommend no more than *five* steps at max.

## Event Handlers
