Svelte Component

Input Chips

Allows input of multiple values.

TYPESCRIPT

Copy

```
import { InputChip } from '@skeletonlabs/skeleton';
```

Source

Page Source

Transitions

Usage

Props

Events

Enter any value...

foo ×

bar ×

fizz ×

buzz ×

foo, bar, fizz, buzz

Bind an array of data to the component `value` property. Only string values are supported at this time.

Whitelist Values

You can provide an array of strings to use as a whitelist. Only whitelisted items can be entered. Invalid or duplicate values will show an error state.
