Utility

Modals

High priority dialogs and modals using a dynamic queue system.

```typescript
import { Modal, getModalStore } from '@skeletonlabs/skeleton';
import type { ModalSettings, ModalComponent, ModalStore } from '@skeletonlabs/skeleton';
```

TYPESCRIPT   Copy

Show Modal

> This feature uses the Singleton pattern, meaning you should aim to implement a single instance of the component per project, but it will remain globally scoped and reusable via a Svelte writable store. Do not reimplement this component for each route page.

Prerequisites

Initialize Stores

Implement the following in the root layout of your application. This is required only once.
