Tailwind

Design Tokens

The Skeleton Tailwind plugin provides a set of utility classes that adjust to your theme settings.

⭘ Source   </> Page Source

Skeleton utilizes a simple but powerful **design token** system to implement theme settings in elements and components. These represent the defaults for most elements and components, which means they auto-adapt based on your theme with minimal configuration out of the box. Best of all you can use these within your custom components as well!

Learn More

We recommend this conference talk by Brad Frost if you would like to learn more about the design token concept.
