Transitions

Skeleton provides a simple interface for modifying Svelte component transitions. This supports Svelte-provided transitions, such as: `fade`, `blur`, `fly`, `slide`, and `scale`. As well as custom CSS and Javascript transitions.

⇄ Transitions

Look for this indicator on each component page. If present, custom transitions are supported.

Properties

Provide the transition and transition parameters as follows.

Transition In

```HTML
<ExampleComponent transitionIn={fade} transitionInParams={{ duration: 200 }} />
```

Copy

Transition Out

```HTML
<ExampleComponent transitionOut={fade} transitionOutParams={{ duration: 200 }} />
```

Copy

Parameters

You can modify parameters for both the default *in* and *out* transitions.

```HTML
<ExampleComponent transitionInParams={{ duration: 400 }} />
```

Copy

Disable Transiti
