Svelte Component

Tabs

Use tabs to quickly switch between different views and pages.

```typescript
TYPESCRIPT                                              Copy

import { TabGroup, Tab, TabAnchor } from '@skeletonlabs/skeleton';
```

⊙ Source   </> Page Source   ♿ WAI-ARIA

Usage   Props   Slots   Events

👁 </>   🎨

Books   Movies   Television

A written or printed work consisting of pages glued or sewn together along one side and bound in covers.

We offer two types of Tab components, but recommend you avoiding mixing these to ensure a consistent user experience.

Tab

See the featured example above for reference. Maintains an active selection state, which is ideal for quickly switching panel content available directly on the page. Please note that using the `panel` slot is optional, but recommended.

TabAnchor
